Prof. Marie-Pierre Hayette (ULiège): <a href="mailto:mphayette@chuliege.be">mphayette@chuliege.be</a>

#### Content

Medical mycology is a domain of medical microbiology of increasing importance. Fungi are frequently responsible for superficial mycoses but also cause life-threatening invasive infections in patients with reduced immunity. With an everincreasing mobility of people, the importance of imported fungal pathologies is also increasing. The course aims to provide insight into fungal infections, host factors, clinical pictures, diagnosis and treatment of these infections.

An important part of the course will be devoted to the acquisition of skills for the identification of fungi. The aim of the course is to enable participants to give adequate mycological advice in clinical practice. All common fungal infections will be discussed. Theoretical sessions alternate with discussions of clinical cases and practical's.

### **Audience**

The target audience are physicians, medical microbiologists and scientists who want to develop or expand their theoretical and practical knowledge in medical mycology.

## **Organisation**

KU Leuven, Department of Microbiology & Immunology

In collaboration with:

The Belgian Society for Human and Animal Mycology & Prof. Dr. P. E. Verweij, UMC St. Radboud, Nijmegen, The Netherlands

#### **Pratical**

The 9-day course will be held from **Monday, September 1-5, and 9-12, 2025** at the KU Leuven Campus Gasthuisberg.

The cost of the course is 1.900 €. This includes the textbook «Medically Important Fungi: A Guide to Identification, Fifth Edition» from D. Larone and slides.

The course is given by a core team of teachers (Professor Katrien Lagrou, Prof. M.P. Hayette) and guest speakers with expertise in a specific field of mycology. The practical sessions are supported by highly trained laboratory technologists.

The course ends with an assessment test. After passing the test, the participant receives a "Certificate of medical mycology".

Accreditation is sought.
